Distinctive Solar Screen, Audio-Visual and Decorative Translucent Roller Shades from Insolroll.

Why Choose Solar Screen Shades?

Unique among window treatments, solar screen shades block the sun but not the view.

Insolroll Shades are scientifically engineered to make your home more comfortable and energy efficient. Solar screen shades control the sun's glare, heat, and UV rays while maintaining an open feeling.

Insolroll offers a wide range of solar screen fabrics to provide the perfect solution for each application. Color as well as openness of the fabric weave are central factors in a fabric's performance, and work in concert with window orientation and size. Our most common fabric selections provide the following benefits:

Light Colors

Light color solar screen fabric provides excellent heat reduction and daytime privacy with moderate view-through, UV reduction, and glare control.

Dark Colors

Dark color solar screen fabric provides excellent view-through, UV reduction and glare control while allowing more heat into the room.

High Performance

High performance fabrics provide the best of both worlds with excellent heat control, glare control and UV reduction, with excellent view-through characteristics.

Is your home at high altitude where glare is a problem but heat is not? Or in a tropical area where heat is intense?

What will you be doing in this room? Will you need extra light? Will you be using a computer screen?

Will you want a clear view of the scenery, or would you just as soon diminish an unpleasant view?

Do you have artwork or furnishings that need protection from UV rays? Whatever your needs, there is a solar screen fabric solution.

Light colored solar screen fabrics are best for heat reduction and diffusing interior light.

Dark colored solar fabrics are best for glare reduction and clear view-through.

Reflective high performance fabrics provide the very best glare and heat protection.

Room Darkening & Decorative Translucent Shades

Where more privacy is needed, translucent and blackout fabrics make it happen. Translucent shades allow light to pass through, creating a glow in the room when the shades are down. Blackout shades block light where room darkening is needed; perfect for media rooms, bedrooms, and anywhere nighttime privacy is desired.

Decorative translucent fabrics filter natural light and provide privacy.

Blackout/room darkening fabrics do not allow light to pass through.

Beautifully textured natural weave solar screen fabrics bring designer style with solar performance to any room.
